0005100006	0000101309	20250929	117912.00	EUR	80

*“Which supplier invoices are stuck,
and how much money is tied up in
them?”*

Accounts Payable · every month since 2011

What do these numbers mean?

From System of Records to System of Context

↑ THE GAP YOU ARE CLOSING

LANGUAGE "Which invoices are stuck?"

PROCESS recorded → VERIFICATION → released → paid

RECORDS RBKP.STAT_KZ = '??'

1,998,331,067 EUR open order volume

394,630,962,907 EUR the same question, answered straight from the schema

Same question. Same database. Factor 197.

Everything is in the repo. Setup is five minutes.

Path	Asset	Contents	Signal
data/	erp_legacy.db	SQLite · 1,274 tables · 310k rows	No server · no Docker
data/	schema.sql schema_full.sql	14 candidate tables · DDL for all 1,274 tables	Maybe · 95k tokens
context/	GLOSSARY.md	Official catalogue	Last revised 2018
context/	PROCESS.md	How the business describes the process	Business language
context/	tickets.jsonl emails.md	43 support tickets · AP and Procurement mail threads	Contradictions included
root/	questions.md baseline.py	15 verified Q&As · naive text-to-SQL baseline	Starting point + enemy

NORTH STAR · Answer live: Which supplier invoices are currently stuck, how much money is tied up in them, and why?

Your demo: five minutes, live, no slides.

**“Here are the invoices, here is the rule I applied,
and here is the source I learned it from”**

...beats a number on its own — even when the number is identical.

Criterion	Weight	What winning looks like
Context quality	35%	Are the answers right? Did you spot the contradictions?
Generalisation	25%	We ask questions you have not seen.
Scalability	20%	Does it work on all 1,274 tables, not just the extract? We will ask you to try.
Demo & value	20%	Convince the woman in Accounts Payable.

Hard stop on features: 15:00 · Live demos: 15:30

Provenance is not a nice-to-have here. It is the product.
